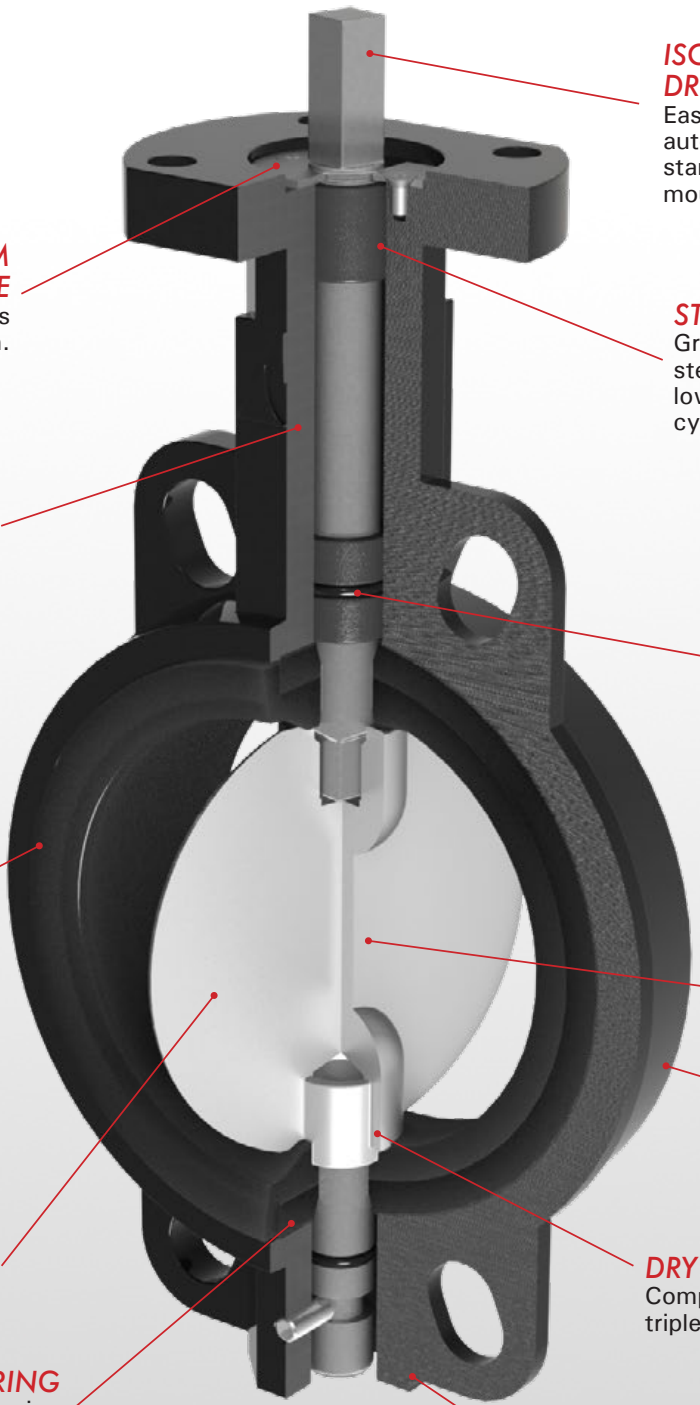
D & S SERIES Ordering Guidelines

Nominal Size	Flange Style	Body Material	Stem Material	Disc Material	Seat Material	Operator Type	Additional *(if required)*
4	– L	– D	– 4	– DI	– E	– LH	–
D Series Lug 1½" – 48"	**L** = Lug	**D** = Ductile Iron (Optional)	**4** = 416 SS (Standard "D")	**A** = Aluminum Bronze	**B** = BUNA-N	**BS** = Bare Stem	**U** = Under Cut Disc
D Series Wafer 1½" – 48"	**W** = Wafer	**S** = CF8M (Standard)	**5** = 431 SS (Standard "S")	**DI** = Nickel Plated Ductile Iron	**E** = EPDM	**G** = Gear Operator	**LO** = Lock Out
S Series 2" – 24"		**C** = Cast Iron	**6** = 17-4PH (14" & Larger)	**N** = Nylon 11 Coated DI	**V** = FKM (Viton)	**ILP** = Infinite Lever Plate	
			3 = 316 SS (Optional)	**S** = A351 CF8M (D Series)	**PE** = PTFE over EPDM	**LH** = Lever Handle	
				Polished A351 CF8M (S Series)	**BEF** = Black EPDM Food Grade		
				T = 6 mil PTFE coating over SS316	**WE** = White EPDM Food Grade		
				PS = Polished A351 CF8M (D Series)	**HT** = High Temp. EPDM		
					SR = Synthetic Rubber		
					SL = Silicone		
					WR = Wear Resistant EPDM		
					NP = Neoprene		

Example Above: *4" L-D-4-DI-E-LH is 4-inch Lug-Style, DI Body, 416SS Stem, Nickel-Plated DI Disc, EPDM Seat, Lever Operated.*

D Series Butterfly Valves
Features & Benefits

Ductile Iron Body - Lug & Wafer Styles



ISO 5211 DRIVE STEM
Easy direct-mount automation with ISO 5211 standard drive stem and mounting flange.

STEM RETAINER PLATE
Stem retainer plate ensures blowout protection.

STEM BUSHINGS
Graphite-reinforced PTFE stem bushings provide for low torque and incredibly long cycle life!

EXTENDED NECK
Allows use with insulated pipes.

SECONDARY PROTECTION
Secondary o-ring stem seal protection.

SEAT
Cartridge-style seat allows field replacement.

NO TAPER PINS
No taper pins on disc ensures trouble-free service and better flow performance.

EPOXY POWDER COATING
as standard

UNDERCUT DISC AVAILABLE
for low pressure media.

DRY STEM JOURNAL DESIGN
Compression energized hub seals & triple stem seals.

BACKING RING
Rigid backing ring allows for dead-end service.

**For sizes larger than 24", please consult factory*

DUCTILE IRON BODY
Durable and economical.

Rev: 03/18/22

D Series Butterfly Valves

- Wafer Ductile Iron Body sizes 1.5″ - 48″
- Lug Ductile Iron Body sizes 1.5″ - 48″
- Lug-style dead end service capabilities through 12″:
  200 PSI uni-directional (Designated with flow arrow)
  100 PSI bi-directional
- Install between Standard ANSI class 125/150 flanges
- Wafer also compatible with PN10/PN16 flanges
- ISO 5211 square drive shaft for easy automation
- Conforms to MSS-SP-67, MSS-SP-25, API–609
- Designed for blowout-proof service
- High-Cv slim disc & 2-piece stem design 1.5″–12″
- Field repairable
- Vacuum service capable 1.5″–12″ to below 10 microns
- Malleable Iron Handles available
- Cast Iron Gear Operators available

Optional Infinite Locking Plates

Valve Sizes		ILP Plate	ILP Arm
in	mm		
1.5-3	DN40-75	02A	07S
4	DN100	02/02A	03/03S
5-6	DN125-150	02/02A	04/04S
8*	DN200*	03/03A	05/05S
10-12*	DN250-300*	03/03A	06/06S

Recommended operation with a gear operator or an actuator for sizes 8"–12"

Over-Travel on Infinite 2-Position Lock Option Allows Disc to Wipe Seat

Locking Arm (Included w/ Plate)

*The **standard** 10-position throttle plate has grooves that allow the handle to snap in place for repeatability and to prevent unintentional movement of the disc.*

*For even more control, **Infinite Lever Plates (ILP)** and arms are available, which allow the valve to be fixed in place with a bolt at any position. It is important to note that the ILP plates and locking arms can be padlocked in the full open and full closed positions only, to prevent tampering or accidental operation.*

20	9820	10527	13367	—				
24	15909	17005	21041	—				

The torque values listed above do not include a safety factor. It is recommended that a safety factor of 20% be added to these numbers for standard self-lubricating service. For water, dry air, solvents, abrasives, powder, and dust service, see service factor guide chart on next page.

Service Factor Rating

Service Condition	Service Type	Media Type	Safety Factor	Multiplier
1	Ideal	Lubricating Oil	20%	1.20
2	Normal	Water	30%	1.30
3	Severe	Dry Air, Solvents	50%	1.50
4	Extreme	Abrasives	100%	2.00

This service factor chart is a suggested guide only. Actual service conditions will vary due to dynamic flow conditions and may require adjustments to the applied safety factor.

Pressure Rating

24	43212	39206	26128	16550	9807	5567	2521	860	21

The valve sizing coefficient is referred to as "Cv" and is the rate of water flow in gallons per minute (GPM) through a given opening at a pressure drop (ΔP) of 1 PSI at standard room temperature. The recommended angle of opening for valve sizing is between 50° and 70° open.

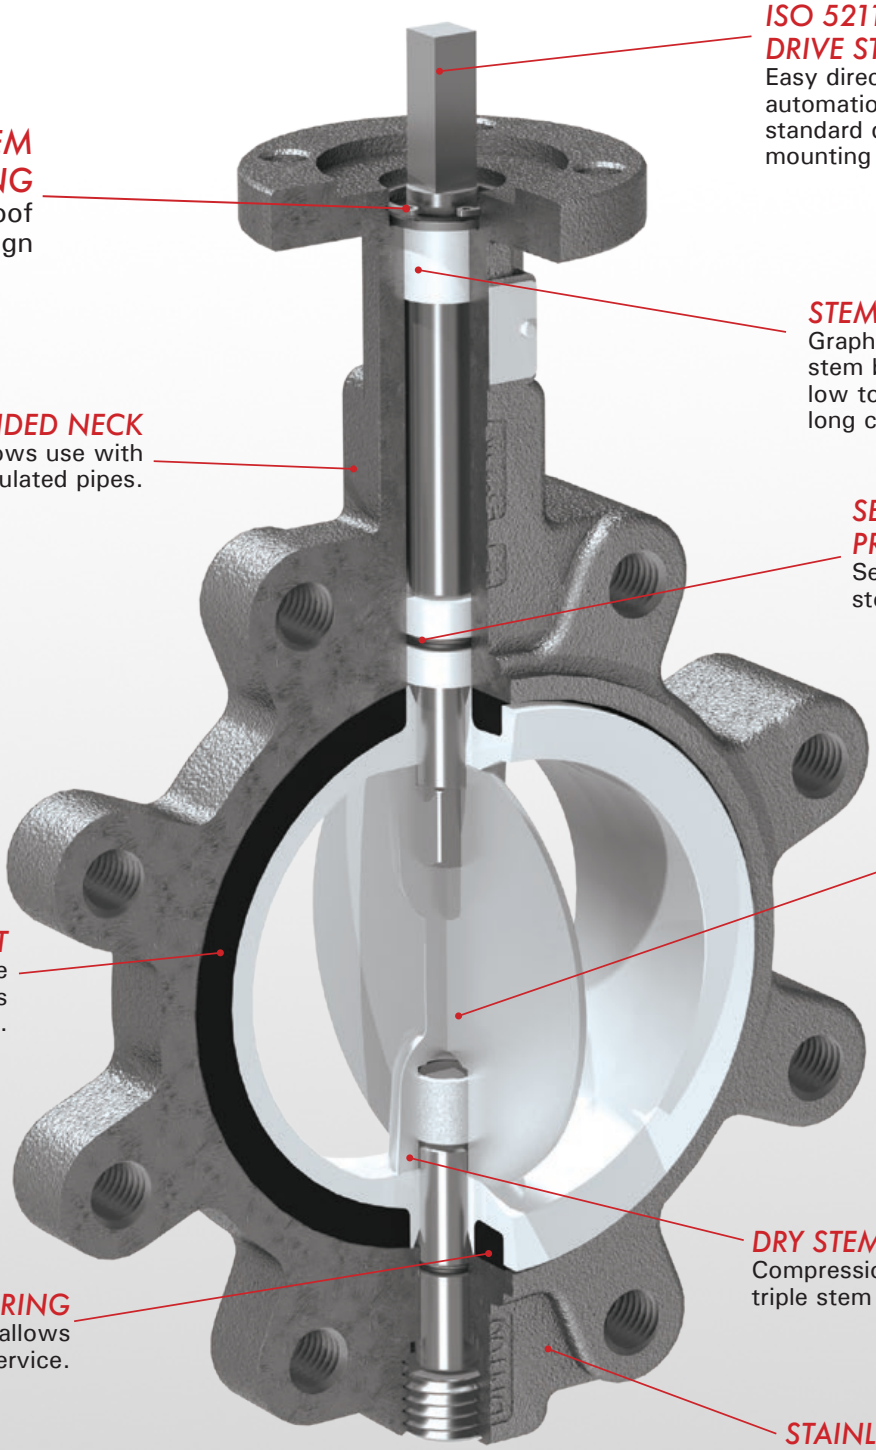
S Series Butterfly Valves
Features & Benefits

Stainless Steel Body - Lug & Wafer Styles



ISO 5211 DRIVE STEM
Easy direct-mount automation with ISO 5211 standard drive stem and mounting flange.

STEM RETAINER RING
Blowout-proof stem design

STEM BUSHINGS
Graphite-reinforced PTFE stem bushings provide for low torque and incredibly long cycle life!

EXTENDED NECK
Allows use with insulated pipes.

SECONDARY PROTECTION
Secondary o-ring stem seal protection.

NO TAPER PINS
No taper pins on disc ensures trouble-free service and better flow performance.

SEAT
Cartridge-style seat allows field replacement.

DRY STEM JOURNAL DESIGN
Compression energized hub seals & triple stem seals.

BACKING RING
Rigid backing ring allows for dead-end service.

STAINLESS STEEL BODY
Tough and corrosion-resistant construction.

**For sizes larger than 24", please consult factory*

S Series Butterfly

- Wafer Stainless Steel Body sizes 2″ - 24″
- Lug Stainless Steel Body sizes 2″ - 24″
- Lug-style dead end service capabilities through 12″:
  200 PSI uni-directional
  100 PSI bi-directional
  (Designated w/ flow arrow)
- Install between Standard ANSI class 125/150 flanges
- ISO 5211 square drive shaft for easy automation
- Conforms to MSS-SP-67, MSS-SP-25, API–609
- Designed for blowout-proof service
- High-Cv slim disc & 2-piece stem design 2″–12″
- Field repairable
- Vacuum service capable 2″ thru 12″ to 10 microns
- 304 SS Handles available
- Cast Iron Gear Operators available

8	DN200*	03A	05S
10-12	DN250-300*	03A	06S

Recommended operation with a gear operator or an actuator for sizes 8"–12"

Optional Infinite Lever Plate

Locking Arm (Included w/ Plate)

*The **standard** 10-position throttle plate has grooves that allow the handle to snap in place for repeatability and to prevent unintentional movement of the disc.*

*For even more control, **Infinite Lever Plates (ILP)** and arms are available, which allow the valve to be fixed in place with a bolt at any position. It is important to note that the ILP plates and locking arms can be padlocked in the full open and full closed positions only, to prevent tampering or accidental operation.*

20	9820	10527	13367	—				
24	15909	17005	21041	—				

The torque values listed above do not include a safety factor. It is recommended that a safety factor of 20% be added to these numbers for standard self-lubricating service. For water, dry air, solvents, abrasives, powder, and dust service, see service factor guide chart on next page.

Service Factor Rating

Service Condition	Service Type	Media Type	Safety Factor	Multiplier
1	Ideal	Lubricating Oil	20%	1.20
2	Normal	Water	30%	1.30
3	Severe	Dry Air, Solvents	50%	1.50
4	Extreme	Abrasives	100%	2.00

This service factor chart is a suggested guide only. Actual service conditions will vary due to dynamic flow conditions and may require adjustments to the applied safety factor.

24	43212	39206	26128	16550	9807	5567	2521	860	21

The valve sizing coefficient is referred to as "Cv" and is the rate of water flow in gallons per minute (GPM) through a given opening at a pressure drop (ΔP) of 1 PSI at standard room temperature. The recommended angle of opening for valve sizing is between 50° and 70° open.

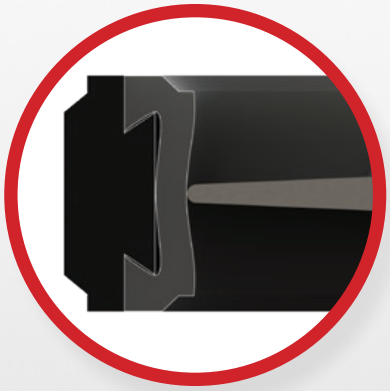
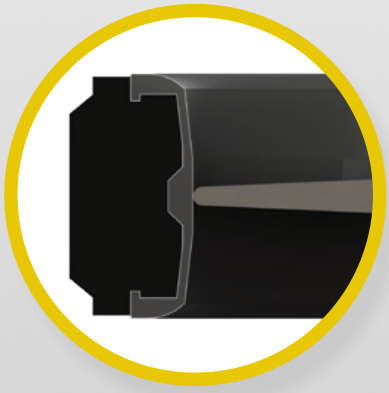
Superior Cartridge Seat Design
Why a Cartridge Seat Is the Preferred Choice:

Booted



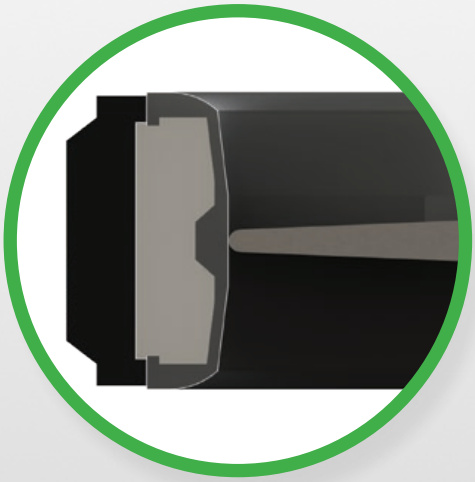
Booted seat bulging around disc contact points

Molded



Molded seat permanently bonded to valve body

Cartridge



Cartridge seat with rigid phenolic backing ring

Feature	Cartridge Seat	Molded Seat	Booted Seat
Replaceable	YES	NO	YES
Ideal for Vacuum Service	YES	YES	NO
Dead End Service Capable	YES	YES	NO
Deformation Resistant	YES	YES	NO
Flange Type Independent	YES	YES	NO

NSF372 ONLY

DI-NP

Nickel Plated Ductile Iron

Ductile iron disc for strength, coated with Nickel Plating for corrosion resistance and increased abrasion resistance.

Recommend Applications:
Air, Kerosene, Oils, Ketones, Hydrocarbons, Solvents, Detergents, Salts, Concentrated Organic Acids

Not Recommended For:
Inorganic Acids, Diluted Organic Acids

NSF61

CF8M

316 Stainless Steel

Stainless steel disc is inherently strong for industrial use and corrosion resistant for a wide range of chemical and environmental applications.

Recommended Applications:
Acetic Acids, Air, Automotive Oils & Fuels, Beer, Freon, Gasoline, Ketones, Oils, Oxygen, Steam, Sea Water, Potable Water

Not Recommended For:
Acids

NSF61

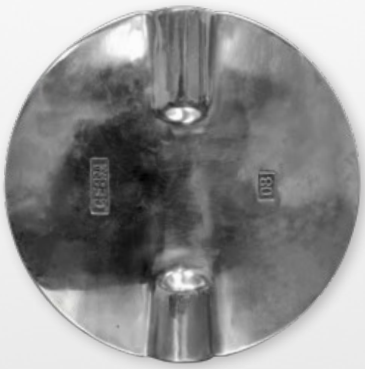
AL-BZ

Aluminum Bronze

Strength similar to carbon steel, but with an aluminum oxide layer on the surface for excellent corrosion resistance.

Recommended Applications:
Sea Water, Brine, Detergents, Gasoline, Alcohols, Esters, Ketones, Potable Water

Not Recommended For:
Acids



NSF61

Polished

Polished 316 Stainless Steel

All the benefits of stainless steel strength and corrosion resistance, plus a highly polished surface for sanitary applications.

Recommended Applications:
Sanitary Applications, Potable Water

Not Recommended For:
Acids

NSF61

NY11

Nylon 11 Coated Ductile Iron

Ductile iron disc for strength, coated with Nylon 11 for corrosion resistance and excellent abrasion resistance.

Recommended Applications:
Inorganic Salts, Alkalis, Most Solvents, Most Organic Acids, Hydrocarbons, Oils, Kerosene, Ketones, Esters, Detergents, Sea Water, Abrasives

Not Recommended For:
Inorganic Acids, Phenols, Chlorinated Solvents

NSF61

PTFE

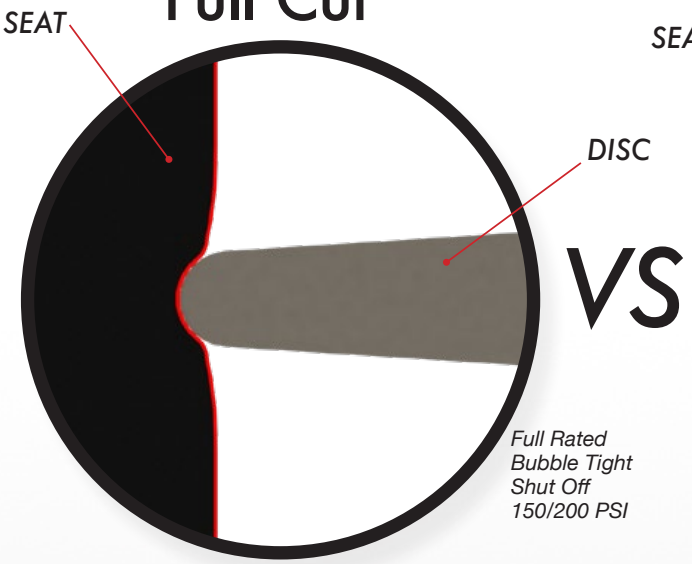
PTFE Coated 316 Stainless Steel

Recommended Applications:
Acids, Alcohols, Solvents, Oils, Potable Water

Not Recommended For:
Fluorine

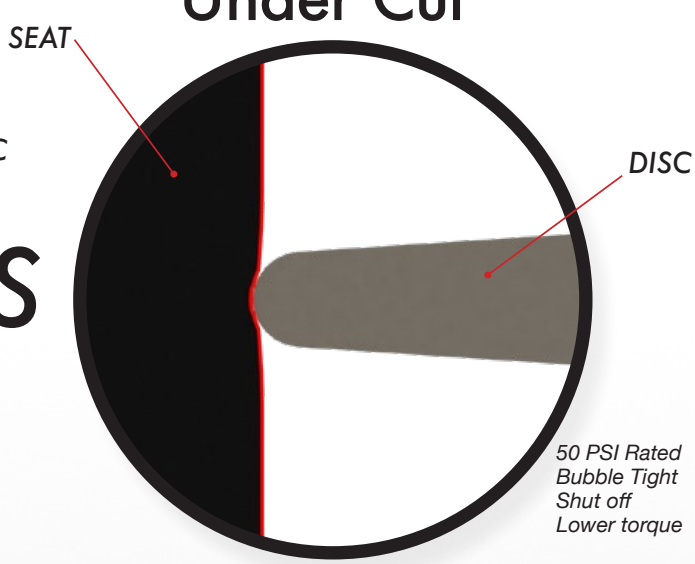
**Material guidelines for reference only. Actual suitability can depend on a combination of temperature, pressure, chemical concentration and other variables.*

Full Cut



Why Full Cut?
Full cut discs provide bubble tight shut off at 150/200 PSI for a wide variety of applications, such as liquid or gas media.

Under Cut



Why Under Cut?
Under cut discs require less torque to operate but are only rated to 50 PSI bubble tight shutoff. common applications are solids dispensing or conveying, or any low pressure process.

Valve & Disc Treatment Options

Passivation

Why passivation treatment?
Passivation is a process by which the inherent corrosion resistance of stainless steel is maximized through a two step process of cleaning and subsequent immersion in an acid bath thereby creating a uniform oxidation layer that optimizes the corrosion resistance.

What's treated?
Disc only

Silicone Free

Why silicone free treatment?
Silicone Free cleaning is conducted on valves in order to prevent silicone contamination within processes (such as automotive painting) that are sensitive to silicone. The valves are subsequently sealed within polyethylene bags to prevent recontamination prior to installation.

What's treated?
Total Valve

Oxygen Clean

Why oxygen clean treatment?
Oxygen cleaning is conducted on valves to prevent the potentially violent oxidation (fire or explosion) of contaminants (most often hydrocarbons) on the surfaces exposed to oxygen within a process. The valves are subsequently sealed within polyethylene bags to prevent recontamination prior to installation.

What's treated?
Total Valve

Slim Disc Design

What is the advantage of the Slim Disc design?
MA Stewart and Sons' slim disc design minimizes the disc profile to maximize flow. This is especially important for smaller butterfly valves where the disc takes up proportunionally more of the flow path. Slim disc design is standard up to 12" sizes.

Standard Disc Design 14" and up

Slim Disc High Cv Design Up to 12"

M.A. Stewart & Sons has provided the above chemical compatibility information as a convenience to our customer partners. This information is compiled from a number of reputable sources and is ONLY intended to provide very general material selection guidance. M.A. Stewart & Sons will assume no liability from its use as there are a multitude of variations in application details. Factors such as pressure, temperature, chemical concentrations and the like play very critical factors in material compatibility. All of them cannot be considered here. In critical applications, materials experts should be consulted or testing should be conducted in order to determine proper materials selection, particularly where dangerous and/or toxic materials are a factor. M.A. Stewart & Sons does not provide any express or implied warranty regarding this information.

Handles & Throttle Plates

M.A. Stewart & Sons butterfly valves can be readily equipped with lever handles for easy manual operation, which come standard with a 10 position notch plate for quick open/close and throttling. Ductile iron valves are available with malleable iron handles and standard plated carbon steel notch plate. Stainless steel valves are available with 304 SS handles and matching 304 SS notch plates. Lever handles and notch plates are available up through 12" sizes. See pages 9 & 19 for more handle details.

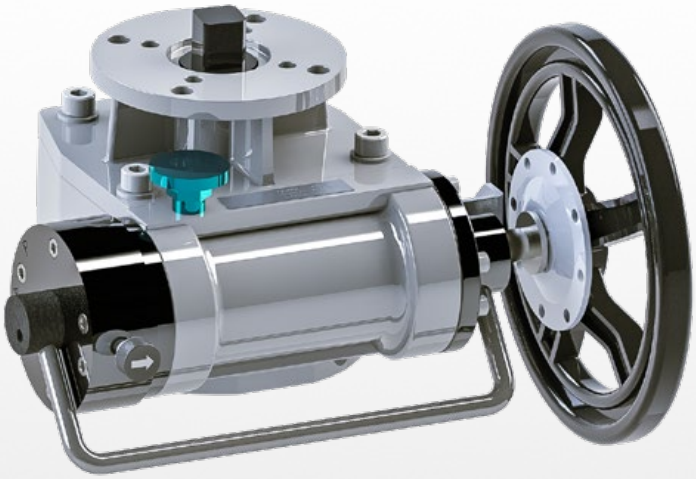
Infinite Locking Plates & Arms

For more adjustable throttling and lockout capability on lever handle operated valves, M.A. Stewart & Sons "ILP" series infinite locking plates are designed to directly replace the standard notch plates. ILP kits come with a 304 SS base plate and arm to allow throttling positions at any angle and lockout at full open or closed. M.A. Stewart & Sons infinite locking plates can be used on either ductile iron or stainless steel butterfly valves up through 12" sizes. See pages 8 & 18 for more details.

Manual Gear Operators

All butterfly valve sizes can be outfitted with a manual gear operator for low-torque operation. M.A. Stewart & Sons' GO Series gear operators are made to direct mount to keep a low profile and simplify installation. Epoxy coated ductile iron housings and malleable iron hand wheels make these gear operators very robust for industrial applications. Chain wheels can be furnished upon request. See pages 9 & 19 for more details.

*Watertight/Submersible gear operators available call for details



Declutch-able Gear Operators

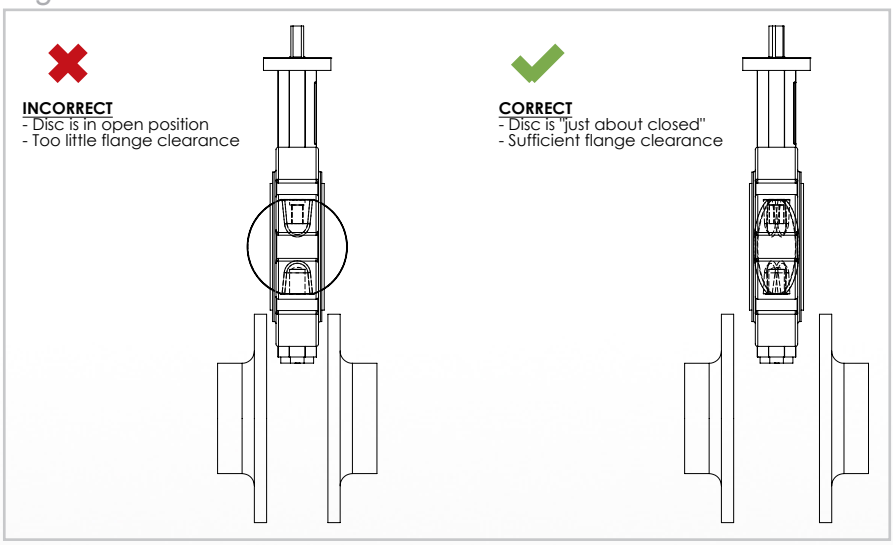
For automated butterfly valves, declutch-able sandwich style gear operators allow for hand wheel operated manual override for maintenance or emergency situations. GOW series declutch-able gear operators direct mount to ISO 5211 standard actuators and to all M.A. Stewart & Sons butterfly valves. Contact factory for more details.

Lockout Devices

All M.A. Stewart & Sons butterfly valves can be equipped with lockout devices, either handle operated or gear operated. Lockout kits come in plated carbon steel or 304 SS. Contact factory for more details.

Installation Guidelines
Please Contact Factory for Full Installation and Operation Manual

Figure 1



Bolting Requirements:

The required bolting information is listed on page 61 (see Table 1), and is designed to provide information regarding size, type, and quantity of bolting recommended for installation of the MA Stewart & Sons Series resilient seated butterfly valves. All recommendations are in accordance with ASME 125/150 specifications. Please note flange bolting is not included with shipment of any valve.

NOTE: For schedule 10 and/or thin wall pipe, extra care must be taken to align seat on flange face to avoid valve damage.

Pre-installation Checklist:

1. Remove any protective flange covers from the valve
2. Inspect the valve to ensure the flow path is free from dirt and debris
3. Be careful that the mating pipeline is also free from dirt and debris, such as rust, pipe scale, welding slag and debris, which can easily damage the seat and disc surfaces
4. Any operators, either manual or automated, should be installed PRIOR to installation, to ensure proper alignment of all connecting hardware, and also proper alignment of the disc and valve seat
5. Double check the valve identification tag to ensure that the valve materials meet the intended operating conditions. It is always critically important to double check all factors during the installation process

Valve Alignment and Flanging:

Do not install flange gaskets – the butterfly valve seat is designed to mate directly to the flange and provides the seal. Leave the disc in the "just about closed" position and center the disc with the pipeline (See Figure 3 on the right). The next step is to insert all necessary bolts to attach the valve to the flanges, which varies depending on wafer or lug style.

For wafer style valves, loosely install the four bolts that pass through the upper and lower body alignment holes as shown in Figure 4 on the right. Next, insert the remaining flange bolts until all bolts are in position, then hand tighten all bolts. For lug valves, loosely install all bolts between the flanges and the lugs and hand tighten when complete if using style C as shown in Figure 4. If using lug style B, first insert threaded studs, then hand tighten the nuts on each side.

Before tightening the bolts, the valve needs to be positioned so that disc movement is free and unobstructed. Carefully open the disc to the fully open position and verify that there is no interference between the disc and the flanges. In addition, ensure that the flanges are properly aligned during tightening to minimize uneven stress or damage on the valve body or seat (See Figure 5 on the right). It is recommended to follow the Bolt Tightening Procedure on the next page.

WARNING: PERSONAL INJURY OR PROPERTY DAMAGE MAY RESULT IF THE VALVE IS INSTALLED WHERE SERVICE CONDITIONS EXCEED VALVE RATINGS. PLEASE TAKE SPECIAL CARE TO DOUBLE CHECK ALL FACTORS DURING THE INSTALLATION PROCESS.

Initial Valve Positioning:

Before valve installation, it is important to properly align the mating pipe flanges. To install the valve, create enough space between the two flanges so that the valve body will fit without contact and carefully move the valve into position. Make sure the valve disc is in the "just about closed" position before insertion (See Figure 2 on the right).

Figure 2

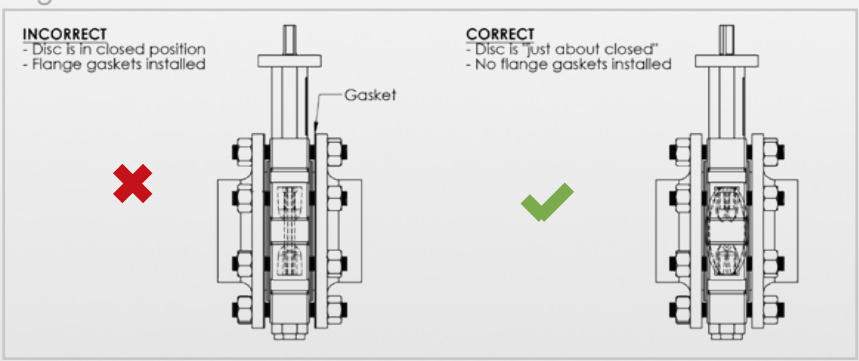


Figure 3

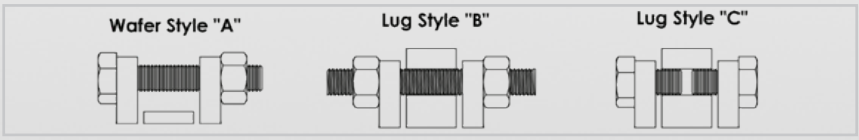

Figure 4

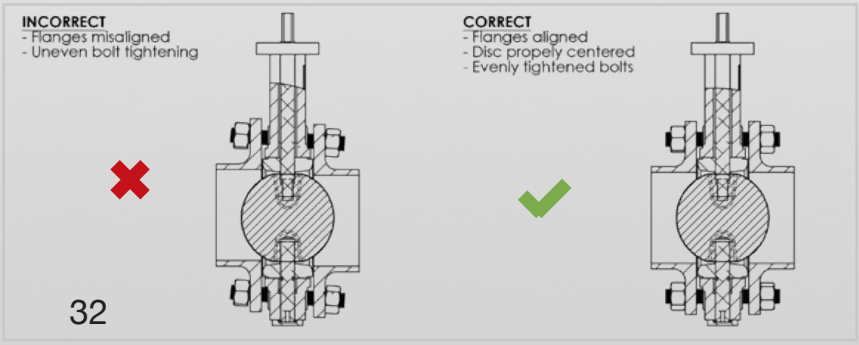
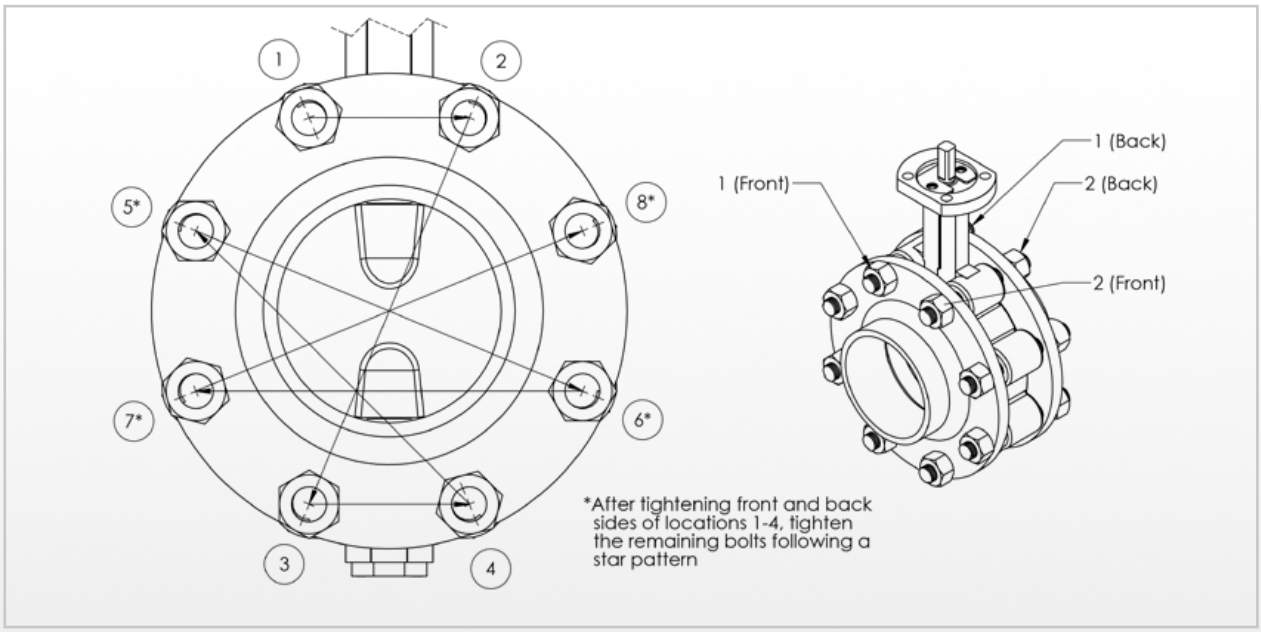


Bolt Tightening Sequence:

For lugged style valves (particularly important for PTFE seated valves), it is essential to tighten the flange bolting uniformly on both sides of the valve to assure that the cartridge seat is not forced out of position. Improper tightening can result in leakage through the stem seals. The proper tightening procedure is as follows (See Figure 6 on the right):

1. If using a long stud and nuts as in style “B”, after positioning the valve between the mating flanges, install the nuts in all positions to hand tight or just until they contact the flange face only. If using bolts as in style “C”, tighten the bolts on both sides of the valve until they are hand tight or just contacting the flange face.
2. The nuts or bolts immediately on either side of the upper stem (position 1 & 2) should be tightened first. Start with position 1 and tighten bolts/nuts in ½ turn increments, alternating between the front and back flanges.
3. Once that position is tight, proceed to tighten the bolt/nut pair opposite from the pair that was just tightened and tighten in the same fashion (position 2).
4. Follow the same sequence as in steps 2 and 3 above on the opposite end of the valve near the lower stem (positions 3 & 4).
5. Tighten the remaining bolts (if any) in a star pattern around the valve and then re-check all bolts/nuts for tightness in a star pattern for all bolts/nuts (position 5, 6, 7, 8, etc). Make sure to alternate sides and tighten in 1/2 turn increments.

Figure 5



Flange Bolting Requirements:

Table 1

Valve Size	Diameter	Machine & Stud #	Cap Screw #	Bolt Length A	Stud Length B	Cap Screw Length C	Thread Size	Recommended Torque in-lbs
1.5"	0.500	4	8	3.25	3.75	1.25	1/2"-13UNC	25-30
2"	0.625	4	8	4.00	5.00	1.25	5/8"-11UNC	30-35
2.5"	0.625	4	8	4.25	5.25	1.50	5/8"-11UNC	30-35
3"	0.625	4	8	4.50	5.25	1.50	5/8"-11UNC	35-40
4"	0.625	8	16	5.00	6.00	1.75	5/"-11UNC	35-40
5"	0.750	8	16	5.50	6.50	1.75	3/4"-10-UNC	35-50
6"	0.750	8	16	5.50	6.75	2.00	3/4"-10UNC	35-65
8"	0.750	8	16	6.00	7.00	2.25	3/4"-10UNC	45-80
10"	0.875	12	24	6.75	8.00	2.25	7/8"-9UNC	55-100
12"	0.875	12	24	7.00	8.25	2.50	7/8"-9UNC	65-120
16"	1.000	16	32	8.00	9.00	3.25	1"-8UNC	75-140
18"	1.125	16	32	8.75	10.00	3.50	1-1/8"-7UNC	85-170
20"	1.125	20	40	9.50	10.75	3.75	1-1/8"-7UNC	85-180
24"	1.250	20	40	10.25	12.50	4.50	1-1/4"-7UNC	100-220

NOTE: These torque values are a general recommendation ONLY for minimum tightening torques. Many factors affect tightening requirements including bolt grade, pipe alignment, flange material and others. Field engineering personnel must make final torque value decisions. Call factory for flange bolting requirements up to 48” size.

CE Marking

is a mandatory conformity marking for certain products sold within the European Economic Area (EEA) since 1985. The CE marking is also found on products sold outside the EEA that are manufactured in, or designed to be sold in, the EEA. This makes the CE marking recognizable worldwide even to people who are not familiar with the European Economic Area. It is in that sense similar to the FCC Declaration of Conformity used on certain electronic devices sold in the United States.

The CE marking is the manufacturer's declaration that the product meets the requirements of the applicable EC directives.

ISO 5211:

This standard defines a standardized interface system between industrial valves and the part turn actuators used operate them. It details the dimensional requirements for both the mounting flanges on both devices as well as the driving and driven components. This standardization simplifies the design of or eliminates the need for interface components between part turn valves and actuators.

NSF/ANSI 372

NSF/ANSI 372

is essentially equivalent to Annex G of NSF/ANSI Standard 61 and assures that the materials used in the water contact components of a water system component do not exceed 0.25% lead content. Some trims excluded. See pg. 4-5

The Canadian Registration Number

is a number issued by each province or territory of Canada to the design of a boiler, pressure vessel or fitting. The CRN identifies the design has been accepted and registered for use in that province or territory.

NSF/ANSI 61

NSF/ANSI Standard 61

NSF/ANSI 61 sets health effects criteria for many water system components including:

- Protective barrier materials (cements, paints, coatings)
- Joining and sealing materials (gaskets, adhesives, lubricants)
- Mechanical devices (water meters, valves, filters)
- Pipes and related products (pipe, hose, fittings)
- Plumbing devices (faucets, drinking fountains)
- Process media (filter media, ion exchange resins)
- Non-metallic potable water materials

As it relates to valves specifically, it assures that the materials in contact with the flow stream do not introduce toxins into the water in amounts that exceed allowable exposure limits. Some trims excluded. See pg. 4-5

API 609

API standard covering the design, materials, face-to-face dimensions, pressure-temperature ratings, and examination, inspection and test requirements for gray iron, ductile iron, bronze, steel, nickel-based alloy, or special alloy butterfly valves.

MSS SP-67

Industry standard covering the dimensions, design, testing, and marking requirements for butterfly valves.

3-Year Limited Warranty

M.A. Stewart & Sons Ltd., hereinafter referred to as "MAS", provides the following limited 3 year manufacturer's warranty regarding all quarter turn valve products manufactured by MAS. This warranty includes all valves which are manufactured by MAS and only applies to those items which are clearly identified as M.A. Stewart & Sons brand labeled products. The warranty stated herein is expressly in lieu of all other warranties and representations, expressed or implied, or statutory, including, without limitation, the implied warranty of fitness for a particular purpose.

MAS warrants it products to be free from defects in materials and workmanship when these products are used for the purpose for which they were designed and manufactured. MAS does not warrant its products against chemical or stress corrosion or against any other failure other than from defects in materials or workmanship. The warranty period is for thirty-six months from the delivery date by MAS to its customers. Any claims regarding this warranty must be in writing and received by MAS before the last effective date of the warranty period.

Upon receipt of a warranty claim, MAS reserves the right to inspect the product(s) in question at either the field location or at a MAS designated facility. If, after the inspection of the product(s) in question, MAS determines that the purchaser's claim is covered by this warranty, MAS' sole liability and the purchaser's sole remedy under this warranty is limited to the refunding of the purchase price or repair or replacement thereof, at the sole discretion of MAS.

MAS will not be liable for any repairs, labor, material, or other expenses that are not specifically authorized in writing by MAS, and in no event shall
MAS be liable for any direct or consequential damages arising out of any defect from any cause whatsoever. If any MAS products are modified or altered in any way, without the expressed written consent of MAS, the products will not be covered by this warranty.

MAS shall not be liable for any incidental, consequential or other damages, costs, or economic losses, including, without limitation, any resulting from labor charges, delays, vandalism, negligence, fouling caused by foreign material damage from adverse flow conditions, chemicals, or acts of God, or circumstances that are not controllable or reasonably foreseeable by MAS.

This warranty shall be invalidated in all circumstances where MAS, acting reasonably, determines that the product(s) was subject to abuse, misuse, neglect, or improper application, installation, alteration or modification not authorized in writing by MAS. All claims received by MAS beyond the warranty period are invalid and shall not be accepted.

Except for the express written warranty contained herein, MAS does not make any other warranty, condition, guarantee, or indemnity, express or implied, statutory or otherwise, regarding the products including without limitation, to the extent permitted by law, any warranty or merchantability or fitness for a particular purpose. All other warranties, conditions guarantees and indemnities regarding any products are hereby disclaimed, excluded and overwritten.
